

## EEMs\_pfiles\_2021\_2025.zip Contents

### Folder summary

This folder contains all corrected EEM scans from 2021 – 2025 (individual file structure described below), the table provides the sample identification associated with each file name including the Reservoir, Site, Date Time, Depth, Replicate, and Dilution factor. See csv 'site\_descriptions.csv' for more information on sampling site location.

### Data Table Structure

All files starting with 'p\_'

Each column (A-AQ) corresponds to Excitation Wavelengths from 240-450 nm every 5 nm (n = 43). Each row (1-151) corresponds to Emission Wavelengths from 300-600 nm every 2 nm (n = 151). Each Excitation, Emission pair contains the CORRECTED fluorescent intensity in Relative Fluorescence Units (RFU). The data is corrected for the instrument excitation and emission corrections, blank corrected using a Nanopure blank collected on the same day as analysis, inner-filtering effects using the absorbance scan collected on the same day of analysis and calibrated against the Raman signal for Nanopure water.

### File Types and Descriptions

File Name	Sample Information					
	Reservoir	Site	Date (month/day/year)	Depth (meters)	Rep	Dilution factor
